Back to Office

Thomson Reuters Back to Office solution can assist you in returning your employees to your office in a safe and automated manner. Efficiently manage employee safety through non-intrusive, facility owned Wi-Fi-enabled device and zone monitoring – limited to the four walls of your building. With this approach, you can feel confident you are doing all you can to protect your employees' safety while maintaining business continuity through automated, intelligent information.

Provide a safe work environment while monitoring potential health and safety concerns

Thomson Reuters has a long history of delivering vital services to government agencies and corporations in times of uncertainty and crisis; therefore, we understand the challenges associated with returning to office while mitigating the spread of COVID-19. Pondera, a Thomson Reuters company, in partnership with Kiana Analytics, has developed a solution that leverages the Pondera asset management system with Kiana real-time detection capabilities and location-based analytics. This combined tool will enable you to effectively manage your facilities, enhance employee safety by providing insight into the movement of people through your spaces, and improve your ability to maintain business continuity.

How it works:

This intelligent back to office solution is a secure, scalable, cloud-based application that utilizes your existing infrastructure to detect Wi-Fi enabled devices allowing you to identify presence and movement of people across your facility. With this solution you will be able to do the following:

Ensure employee safety – Using your company’s existing private network, accurately identify location and dwell times to identify employees that may have been exposed to a confirmed infected employee or visitor.

Maintain privacy – All data is captured in the company’s designated period of time, with tokenization and cryptographic technologies to keep data secure. Maintains compliance with GDPR, CCPA, and HIPAA requirements.

Incident tracking – Your HR and contact trace team will access one common contact tracing platform allowing for shared case notes, actions taken, and real-time reporting.

Reporting – Generate daily progress reports, trends, and management level reports quickly within the system to facilitate timely reporting to help ensure business continuity is maintained.

Real-time alerts – Receive real time alerts to identify potential exposure risks if there are too many people within a location for a specific time.

Prepare for a wellness focused office – Access highly accurate, real-time analytics on building occupancy and space utilization to make informed decisions.

Enhance operational efficiency – Understand the actual number of people utilizing your building services and manage your resources accordingly.

Training – Experienced Thomson Reuters product specialists will train staff via a combination of web-based and in-person (via phone) delivery methods. We will support customers’ training requirements throughout the duration of our engagement.

As organizations determine a return to office plan, many different steps and options are being considered in order to keep employees safe. Alternative schedules and distantly structured office spaces are some strategies being put in place, but in order to truly understand and mitigate exposure, a tool is needed to identify the presence and movement of people while at work.

Thomson Reuters is not a consumer reporting agency and none of its services or the data contained therein constitute a ‘consumer report’ as such term is defined in the Federal Fair Credit Reporting Act (FCRA), 15 U.S.C. sec. 1681 et seq. The data provided to you may not be used as a factor in consumer debt collection decisioning, establishing a consumer’s eligibility for credit, insurance, employment, government benefits, or housing, or for any other purpose authorized under the FCRA. By accessing one of our services, you agree not to use the service or data for any purpose authorized under the FCRA or in relation to taking an adverse action relating to a consumer application.

Thomson Reuters Contact Trace may only be used for the limited purpose of supporting data subjects with a suspected or confirmed infection such as COVID-19 and notifying individuals that you reasonably believe may be at risk of also contracting the infection. The Contact Trace + Kiana solution may only be used for the limited purpose of facilities management and employee safety. You agree that all data will be maintained as strictly confidential and will not be shared except as necessary in furtherance of this limited purpose. No adverse or punitive action may be taken against an individual based on information obtained through your use of the solution. Product access is subject to your ongoing compliance with applicable federal, state, and local laws including those governing the privacy and security of health information and consumer.
